

Depot Park Stormwater Pond and Pump Station

Description:

The project proposes construction of a lined stormwater pond on the Depot Park site located at the SE corner of Depot Avenue and Main Street. Amenities include concrete retaining wall & forebays, braided stream, pervious trail, and creation and restoration of wetland areas.

This project also proposes construction of a stormwater pump station at the Sweetwater Branch Creek crossing of Depot Avenue (south side) just east of SE 4th Street. The pump station will pump water from the creek to the Depot Park stormwater facility for treatment.

Designer:

Environmental Consulting & Technology, Inc. (ECT) is the Engineer of Record.

Contractor: RE Arnold Construction –Archer, FL

Schedule:

Construction is underway and approximately 35% completed. Completion is expected by March 2014.

Project Manager:

John Veilleux, P.E.
