

Depot Park Non-MGP Contamination Remediation

Description:

The project proposes removal of contamination, including arsenic, PAH, and TCE from the Depot Park site by a certified remediation contractor. This project follows a recently completed 2-year GRU project where coal tar was removed from this site as well as from the Depot Avenue roadway and the Poole Roofing site across the street.

The Depot Park site is located in the SE corner of Depot Avenue and Main Street.

Contractor:

Environmental Consulting & Technologies, Inc. (ECT) is the certified remediation contractor.

Schedule:

The contamination remediation work was completed in August 2012.

Project Manager:

John Veilleux, P.E.
