

Napier Oaks street lighting

Description:

At the request of the Napier Oaks neighborhood watch group, the Public Works Department surveyed existing lighting conditions in the neighborhood to determine if they met city standards.

Working with the neighborhood and GRU, 7 locations were identified as requiring additional lighting to meet the city's minimum standards. In addition, 3 non-functioning lights were identified and referred to GRU for repair.

New 100 watt high pressure sodium light fixtures were installed at these locations. Where existing GRU poles were not available, new wood poles were used in accordance with city standards.

Progress:

- Staff met with neighborhood in August 2011 to discuss lighting program.
- Repairs referred to GRU August 2011.
- Neighborhood surveyed August 2011.
- GRU notified to proceed with installation September 2011.
- Installation is complete as of March 2012.
