Consultant:

Water & Air Research

Contract Amount: \$71,277

Schedule:

Sampling complete.

Report due in December 2013.

Description:

The project proposes to provide water quality and trash trap monitoring as well as stream assessment work on Sweetwater Creek. Water samples and flow readings will be taken at in-flow and outflow locations following 7 to 10 storm events. Testing for various chemical, physical, and bacteriological parameters will be performed and the results will be summarized in a final report. In addition, the effectiveness of the Rosewood trash trap will be studied, and BMP effectiveness and assess habitat changes along the creek.
